SMILE MAKEOVERS BY KREMER DENTAL CARE

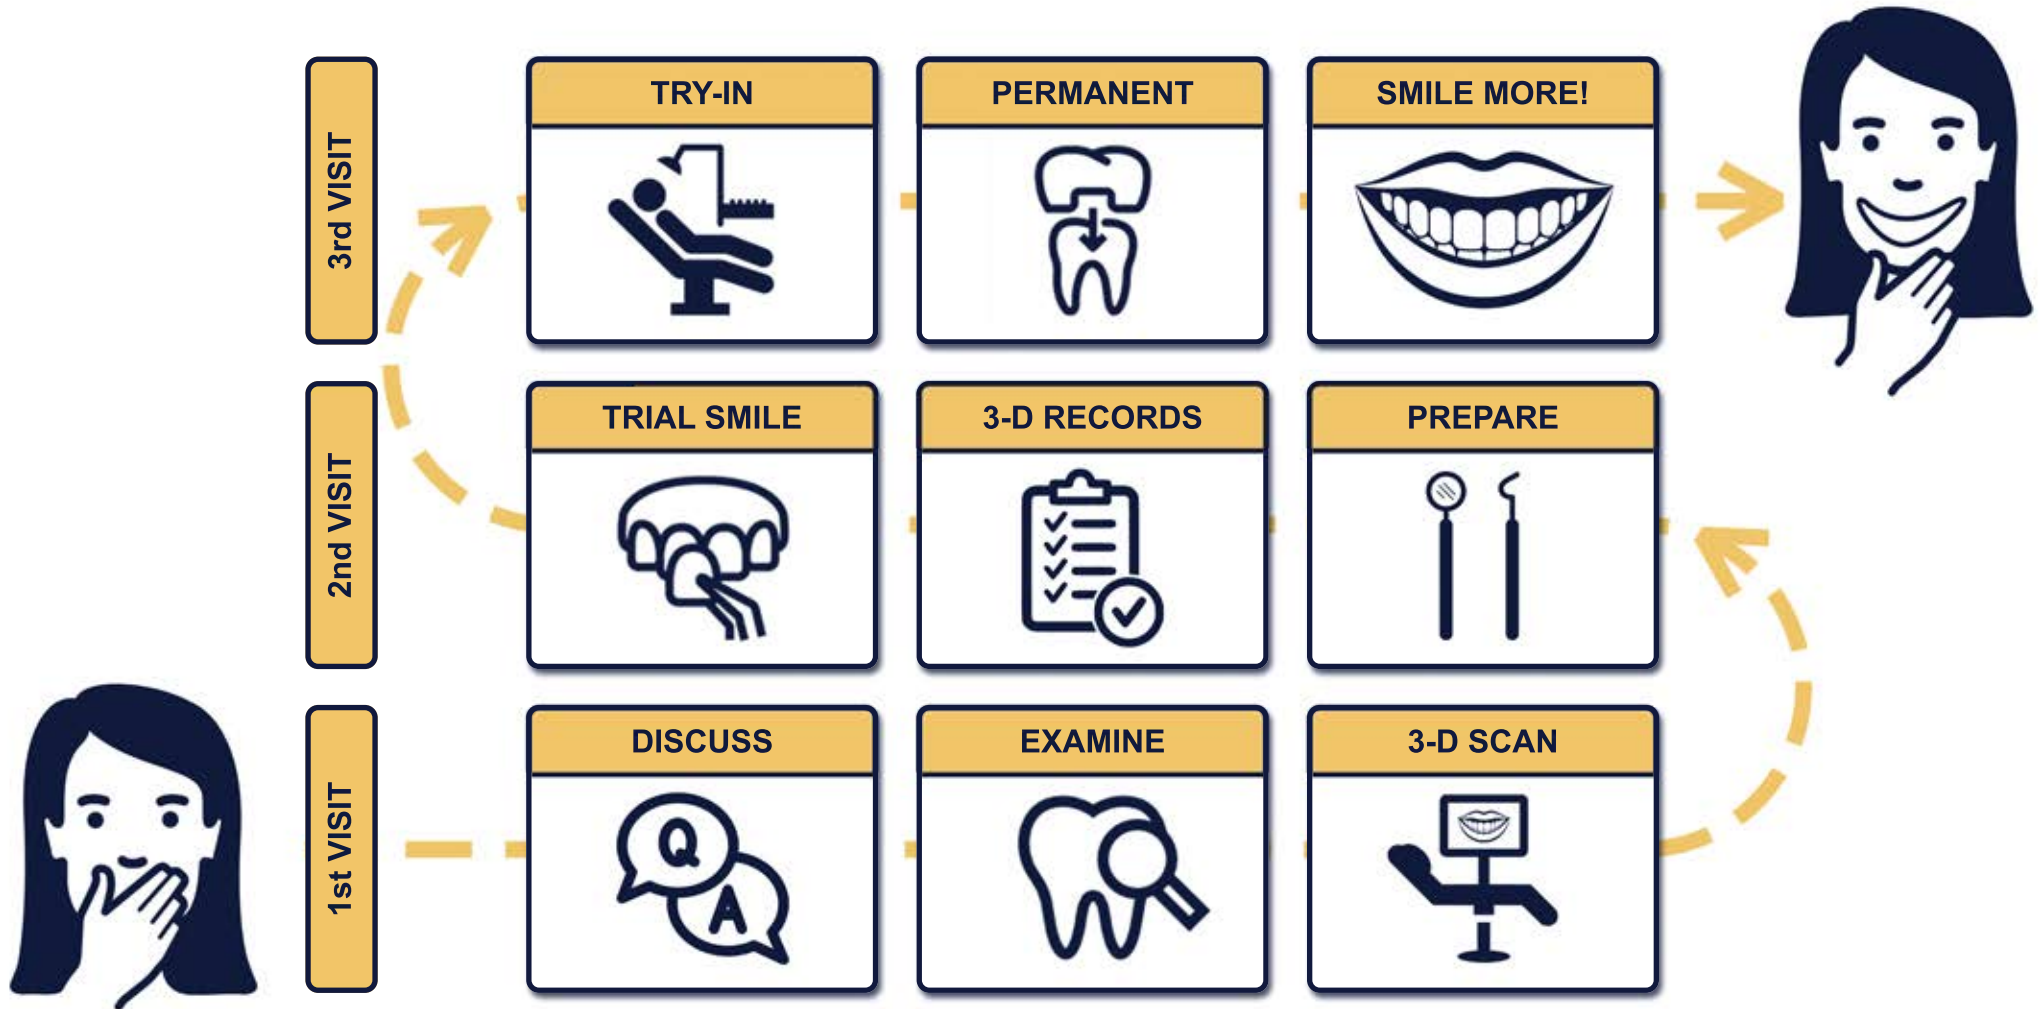

You can have your new smile in 8 weeks or less, so that you don't have to hide your smile anymore!

Each step is described on the next page.

SMILE MAKEOVERS BY KREMER DENTAL CARE

You can have your new smile in 8 weeks or less, so that you don't have to hide your smile anymore!

VISIT 1:

Discuss –

The first step is to listen to you. We want to hear about your smile concerns and your dreams, then we will spend time talking about your dental history, medical history and any concerns you may have. Your best possible outcome relies on our team understanding your desires for your ideal smile.

Your smile makeover plan will be individualized and custom designed to complement your specific facial structure, skin and eyes. Kremer Dental Care has pursued advanced training in dental aesthetics to confidently guide you in making good choices.

Examine –

This will be thorough and comprehensive oral health examination. You will be encouraged to ask questions and voice concerns throughout the process because we seek to understand your current oral condition and the underlying factors that affect your smile. Keep in mind that disease, nutrition, occlusal function (your bite), accidental injury, your genetic makeup and even more factors affect the appearance of your smile.

At Kremer Dental Care our objective will be to solve as many problems as possible, in order to make sure your new smile is optimally healthy and functional so it lasts a long, long time.

3-D Scan –

After your comprehensive examination we will be ready to take 3-D scans of your mouth and render 3-D images. This is done with the help of top of the line computer technology so that can map out exactly how each new tooth should look. Once you are completely happy with the 3-D scans, we will send the images to our ceramics lab and then we will create a well thought out smile makeover plan that is specific to achieving your new smile.

Get excited because on your next visit you will be able to take your new smile for a test drive.

You can have your new smile in 8 weeks or less, so that you don't have to hide your smile anymore!

VISIT 2:

Prepare –

During your second visit, the first step is to prepare your teeth for placing your new trial smile. This involves cleaning your teeth and shaping your current teeth for the best placement of your new smile. We might also whiten some of your existing teeth that would remain otherwise untouched.

3-D Records –

Just before placing your trial smile, we will take detailed 3-D records of your teeth so that we can always track where your original teeth are now, and have a reference point for the future. This is very important for helping keep your new smile last as long as possible.

Trial Smile –

During the time between your 1st and 2nd visits, beautiful and durable temporary teeth are made from hard acrylic. These are adhered to our prepped teeth and can be worn while you test-drive your new smile for function, comfort, and appearance. This time is important as it gives you and your dentist another opportunity to refine the changes in your teeth for optimal results prior to creation of the final restorations.

You will walk out of your second visit with your trial smile. For the next 3-4 weeks you will have your trial smile to make sure that it 'fits' you. During this time we need to determine if final modifications need to be made to your permanent teeth that are being made.

"I wish I had done it 10 years earlier."

VISIT 3:

Try-in –

Your final visit begins with a detailed discussion about how you felt during the time you wore your trial smile. After we discuss everything, we will remove your temporary smile and test out your new permanent smile.

Permanent –

Once your teeth are prepared for receiving your permanent smile, we will bond in your new permanent teeth. After placing the permanent teeth, we can make any final adjustments to the shape and shade to ensure that you are COMPLETELY happy with your new smile.

Smile More! –

You will walk away from our office with a bigger smile than you've had in a long time. Our happiest moment is when we have exceeded your expectations and you are smiling!
